

Revolutionary Range Technology

# WIRELESS TARGET RETRIEVER

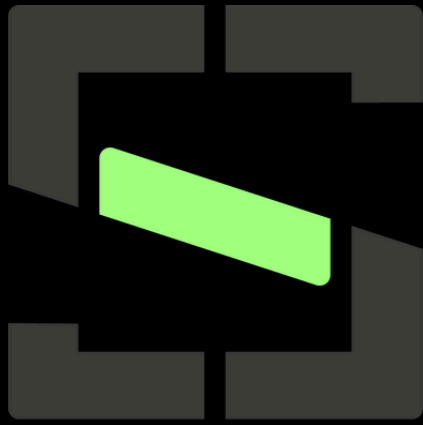

# Product Overview

The Wireless Target Retriever is an advanced, remote-controlled system engineered to deliver targets directly to the shooter with precision and ease.

It also enables the creation of dynamic training scenarios, including controlled target movement away from the shooter, variable exposure speeds, and the ability to engage targets at multiple distances without changing position. This enhances both training efficiency and overall shooting performance.

This advanced system minimizes downtime and enhances safety across all shooting range environments. Designed for competitive shooters, law enforcement training, and recreational use, the Wireless Target Retriever delivers a more efficient, controlled, and seamless shooting experience.

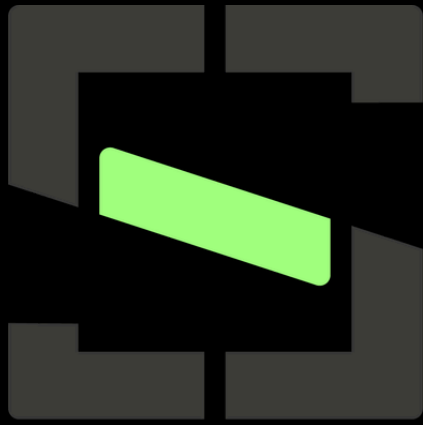

# Key Features

Experience the efficiency of fully wireless operation with our advanced target retriever system. The ultra-quiet motor minimizes disruption during training sessions, while the robust, durable construction is engineered to withstand years of intensive use in demanding shooting range environments.

The system is designed for quick and straightforward installation, eliminating the need for professional assistance. With a simple mount-and-connect setup, you can have your retriever fully operational and ready for use within minutes.

# Key Benefits

## Save Time

Achieve instant target retrieval at the touch of a button—eliminating the need for time-consuming trips downrange.

## Reduce Range Downtime

Maximize operational efficiency with fewer interruptions and seamless session transitions, keeping your range active for longer periods.

## Scenario Editor

Effortlessly design, customize, and store your own training scenarios to suit a variety of needs.

## Master Controller

Control multiple target retrievers across different lanes from a single tablet, ensuring streamlined and centralized operation.

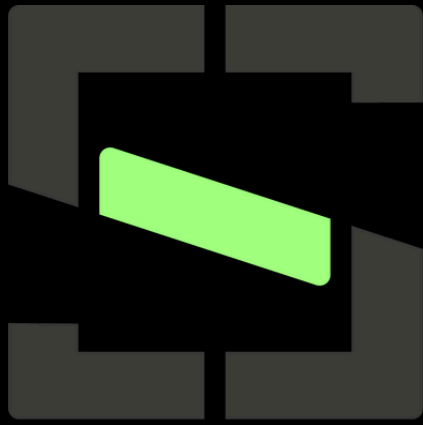

## Improve Safety

Eliminate the need for shooters to walk downrange, reducing exposure to potential hazards and keeping everyone protected at all times.

## Enhance Training Efficiency

Maximize practice sessions with instant target retrieval, allowing for more repetitions and focused skill development.

#### Range & Battery Performance

- Maximum retrieval distance: 100+ yards
- Retrieval speed: 6 feet per second
- Battery life: 8+ hours of continuous use
- Rechargeable LiFePO<sub>4</sub> battery
- Full charge time: 2.5 hours
- Low battery indicator included

#### Weight Capacity & Compatibility

- Weight: 44 lbs (battery included)
- Works with paper, cardboard, and plastic targets
- Target holder included
- Integrated lighting
- Long-range communication protocol (backup)
- Compatible target size: 23"
